EXPERIENCE

Paycom – Irving, TX

June 2024 – Present

Software Developer III

- Designed and delivered full-stack features using PHP and JavaScript (React, jQuery) within a collaborative Agile team, contributing to scalable and performant web solutions
- Enhanced user experience and performance by developing parallel child job execution, improving process speed by ~25x
- Collaborated with a cross-functional team to develop a new notification dashboard which aggregates email features from multiple company modules
- Cooperated closely with quality assurance team to ensure accurate delivery of quality software
- Worked closely with customer specialists to research, diagnose, and resolve client-impacting bugs and problems within hours

Marathon Petroleum Company – San Antonio, TX

August 2022 – December 2022

Applications Developer Intern for IT Finance Team

- Awarded first place in a term-long hackathon for working with a team of interns to develop a new invoicing website using .NET Blazor, with solution currently in use today
- Developed a webpage to compile customer credit limit history and create a formatted Excel export
- Enhanced an internal cost reporting website with several bug fixes and feature improvements
- Partnered with subject matter experts and analysts to ensure complete understanding of user requirements at all stages of the project lifecycle

EDUCATION

Texas A&M University – College Station, TX

Graduation May 2024

Bachelor of Science in Computer Science

Cumulative GPA: 3.826

Minor in Engineering Project Management

Relevant Coursework:

Software Engineering, Database Systems, Programming Studio, Computer & Network Security

Programming Languages, Design and Analysis of Algorithms, Artificial Intelligence

PROJECTS

One Six Eight – Personal Project (In Development)

Website that combines calendars, to-do lists, and habits, into one integrated application

- Leveraged SvelteKit (JavaScript, HTML/CSS) and PostgreSQL to build a reactive web application
- Deployed application using both Supabase's and Vercel's cloud infrastructure to experiment with cloud hosting, database provisioning, and CI/CD pipelines
- Explored the full SDLC by researching and comparing tools, writing a loose design document, drawing out wireframes, and emulating Agile as a solo developer
- Focused on designing and building a clean, modular, extensible, and reusable program architecture to maximize clarity, minimize bugs, improve performance, and ensure readability

SNIPeMe – Senior Capstone Project

Social media application that assigns each user a friend whom they must secretly photograph by the end of the day

- Led scrum processes and collaborated across a four-person Agile team to deliver a cross-platform mobile app using React Native and Firebase
- Implemented photo-capture and post approval features, iterating weekly in Agile sprints based on user testing and team feedback
